

## ALBIS ADDITIVE BATCH PE-P 10 ANTIOXIDANT

ALBIS ADDITIVE BATCH PE-P 10 ANTIOXIDANT protects polyolefines against thermo-oxidative attacks and gives the products an increased ageing protection.

### Composition

Polyethylene with a lower density (MFI [190/2.16] circa 2 g/10 min) and a highly effective antioxidant on base of a sterically hindered phenole with low volatility and high extraction resistance.

### Application

ALBIS ADDITIVE BATCH PE-P 10 ANTIOXIDANT can be used for stabilization of polyethylene (PE-HD and PE-LD), polypropylene as well EPM- and EPDM-polymerisates. Because of the low volatility and the high extraction resistance a use is possible in that articles, who get in contact with solutions (e.g. washing machine parts).

ALBIS ADDITIVE BATCH PE-P 10 ANTIOXIDANT does not contain co-stabilizer. For the purpose of more improvement of the ageing protection the ALBIS ADDITIVE BATCH PE-P 10 ANTIOXIDANT may be combined with co-stabilizer, e.g. thiodipropionate (special combi batche on demand).

### Dosage

An addition of 0.3 - 2.0 % ALBIS ADDITIVE BATCH PE-P 10 ANTIOXIDANT is recommended in case of demand, in extreme excessives up to 3 %. The dosage for EPDM- and normally unsaturated EPDM-grades is 0.5 %, for strongly unsaturated EPDM-grades up to 1.5 % ALBIS ADDITIVE BATCH PE-P 10 ANTIOXIDANT.

### Delivery Form

cylindrical pellets

### Packaging

25 kg PE bags

Any information given on the chemical and physical characteristics of our products, including technical advice on applications whether verbally, in writing or by testing the product, is given to the best of our knowledge. It does not exempt the buyer from carrying out his own investigations and tests in order to ascertain the products' specific suitability for the purpose intended.

The buyer is solely responsible for the application, utilisation and processing of the products, and must observe the laws and government regulations and the consequential rights of any third party. At all times our Conditions of Sale apply.
