

Dear readers,

This autumn our focus turns to Fakuma, taking place next week in Friedrichshafen, Germany – one of the best networking events in our industry in 2026. Together with my team I am looking forward to meeting customers and partners there.

Economically, we continue to navigate challenging waters. All the more pleasing that ALBIS is not only holding its position in Europe but expanding it in several areas.

Digitalization, for example, is no buzzword for us but lived practice. Worldwide, we now work with a modern AI assistant solution – a genuine productivity boost for our daily work.

At the same time, we are consistently driving forward our internationalization: we are currently preparing market entry with local ALBIS entities in Malaysia and Mexico – two important building blocks for our international customers on the path to an even more global setup.

In this newsletter, we have put together further news and insights from across the ALBIS world. I hope you enjoy reading it.

Kind regards,
Horst Klink

INDUSTRY

When a component becomes packaging: the PPWR

What does the EU Packaging and Packaging Waste Regulation have to do with injection molding? More than you might think at first – and some of its provisions are already relevant today.
